

RE: NAB's petition 04-160:

I travel long distances by vehicle regularly and have found the traffic and weather service provided by XM Satellite Radiio to be extremely beneficial. I easily obtain regular updates, instead of having to search around constantly for a local station that may or may not be broadcasting this infomation. I urge you to continue the tradition of allowing a company to provide a service that the market needs, as well as allowing for good old fashion american business competition. I pay a fee for this service and would very much like to not have it "regulated" away for any other reason than local competition.

Sincerely,

Michael Rutledge
